Osteoporosis is a condition that weakens bones, making them fragile and more likely to break. It develops slowly over several years and is often only diagnosed when a minor fall or sudden impact causes a bone fracture. The most common injuries in people with osteoporosis are: wrist fractures; hip fractures; fractures of the spinal

1. Introduction. Spleen rupture is mostly caused by trauma. However, in some rare cases, it also occurs without obvious trauma, which is called atraumatic splenic rupture (ASR) or spontaneous splenic rupture. ASR is often life threatening due to the delay of diagnosis and treatment. ASR is uncommon, and little is known about its characteristics.
