We all have heard of and used "user manuals." A user manual is a document to assist a user in using and working with a piece of equipment or software product. They are developed to guide the user so that they will have less problems and be more successful in using the product. What if every person came with a user manual? A guide that explains who they are and how to work with them? A

few words that would provide insight into who they are and what you can do to connect with them better. The opportunity for creating greater understanding and opening productive, and transformational, conversations then becomes more possible. Better conversations lead to better relationships. Better relationships allow an environment of innovation and productivity. Trustful relationships in teams are at the foundation of psychologically safe work places. The latest research shows a direct correlation between trust and performance. The User Manual of Me is an online tool and companion workbook's purpose is to assist you in a personal brand statement to help others understand who you are, what you value, and how you like to work. It shows you how to construct a personal leadership brand statement according to the latest neuroscience research that has been proven to connect with people better. A well-crafted leadership brand statement's purpose is to evoke positive emotions, thoughts, and images in people. To help you connect with others on a personal level and open the channels of communication about what is important and valuable in working better together.

The news is everywhere. We can't stop constantly checking it on our computer screens, but what is this doing to our minds? We are never really taught how to make sense of the torrent of news we face every day, writes Alain de Botton (author of the best-selling *The Architecture of Happiness*), but this has a huge impact on our sense of what matters and of how we should lead our lives. In his dazzling new book, de Botton takes twenty-five archetypal news stories—including an airplane crash, a murder, a celebrity interview and a political scandal—and submits them to unusually intense analysis with a view to helping us navigate our news-soaked age. He raises such questions as Why are disaster stories often so uplifting? What makes the love lives of celebrities so interesting? Why do we enjoy watching politicians being brought down? Why are upheavals in far-off lands often so boring? In *The News: A User's Manual*, de Botton has written the ultimate guide for our

frenzied era, certain to bring calm, understanding and a measure of sanity to our daily (perhaps even hourly) interactions with the news machine. (With black-and-white illustrations throughout.)

Meant as a light read that the reader can come back to and meditate on periodically, Anderson has done a wonderful job of condensing fundamental teachings, making *Your User's Manual* a straightforward read in answering life's most pressing questions and recognizing what is truly important.
